Android-first Mobile Engineer

6+ years building production Android, Flutter, and iOS apps, with depth in Kotlin, Jetpack Compose, Coroutines, Flow, Hilt, Room, WorkManager, Retrofit, release automation, CI/CD, crash triage, and Play Store delivery.

20M+ MAU product experience

10+ shipped apps

Android + Flutter + backend ownership

Dear Hiring Team,

I am applying for Android and mobile engineering roles where product ownership, modern Android execution, and reliable release delivery matter. My strongest work sits at the intersection of user-facing product engineering and practical production operations: building features, modernizing legacy code, investigating performance issues, and getting high-quality releases safely into users' hands.

At PrimeTrace Technology, I work on a consumer Android application serving 20M+ monthly active users. My scope spans feature delivery, migration toward modern Android architecture, release automation, crash and ANR triage, and day-to-day production debugging. I am comfortable moving from product requirements into implementation details, then back out to release readiness, analytics, and user impact.

I have also contributed to large-scale consumer apps including Crafto, Kutumb, and Instabill, where I worked with reusable UI systems, REST integrations, low-device performance concerns, and the discipline needed when small regressions can affect a large user base.

Outside my employment history, I independently built and shipped 10+ mobile apps across native Android and Flutter, including Minimal Launcher, mMoney/Splitwisely, mDevices/mFamily, and AlertBox. I also run the supporting stack myself: Node.js/Express APIs, MongoDB replica set, Nginx, monitoring, Firebase Auth, RevenueCat, Fastlane, and GitHub Actions. That end-to-end ownership helps me connect mobile decisions to backend contracts, release processes, analytics, monetization, and store outcomes.

I would be glad to bring that mix of Android depth, Flutter range, and ownership mindset to your mobile team.

Sincerely,
Sanjay Gangwar
